Don't Get Burned : 3.5 Pain Radiating to the Back

Recommendation:

Consider the diagnosis of Thoracic Aortic Dissection.

- Measure bilateral arm blood pressure, if possible.
- Look at the X-Ray specifically for signs of TAD (e.g. abnormal aortic contour, widening or mediastinum, deviation of the trachea or mainstem bronchi). Document your observations.

This is offered as a general recommendation, not a standard of care. Specific management is subject to the facts of a particular patient's presentation and the individual physician's judgement.
